AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares substantial sequence homol. with animal kinases, especially **serine-threonine** kinases, calcium/calmodulin-dependent protein kinase, and mitogen activated kinases. NHP gene **expressed** in, *inter alia*, human cell lines, human fetal and adult **brain, pituitary, spinal cord, testis**, adipose, and esophagus cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares structural similarity with animal kinases, including cell division control protein kinases, serine/threonine protein kinases and membrane-associated guanylate kinases (MAGUKs). The NHPs are novel proteins that are expressed in, inter alia, human cell lines and human fetal and adult brain, pituitary, cerebellum, thymus, spleen, lymph node, bone marrow, trachea, fetal and adult liver, prostate, testis, thyroid, adrenal gland, pancreas, salivary gland, stomach, small intestine, colon, uterus, placenta, mammary gland, adipose, esophagus, bladder, cervix, rectum, pericardium, hypothalamus, ovary, fetal and adult kidney, and fetal lung cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares structural similarity with animal kinases, and particularly calcium/calmodulin-dependant protein kinases and serin/threonine protein kinases. The NHP is a novel protein that is expressed in, inter alia, human cell lines, **testis, pituitary, fetal brain, thymus, spleen, cerebellum, trachea, thyroid, adrenal gland, fetal kidney, colon, uterus, pancreas and lung** cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified

human proteins, designated NHPs, which shares substantial sequence homol. with animal kinases, and more particular **serine/ threonine** protein kinases. While NHP shares sequence homol. with other **serine/ threonine** protein kinases, its primary sequence is unique. Its **expression** is detected in various human tissues including **brain, pituitary, spinal cord, spleen, trachea, kidney, prostate, testis, adrenal gland** cells, and gene trapped human cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

OTHER SOURCE: WPI: 2002-599780 [64]

AB DERWENT ABSTRACT:

NOVELTY - An isolated nucleic acid molecule (I) comprising a 2007 or 1827 nucleotide sequence, encoding a novel human protein (NHP) comprising a 668 or 608 residue amino acid sequence, given in the specification, is new.

WIDER DISCLOSURE - (1) NHP encoded by (I), that share structural similarity with animal kinases; (2) host cell expressing systems comprising (I); (3) antibodies to NHP and anti-idiotypic antibodies; (4) fusion proteins comprising NHP; (5) genetically engineered animals that either lack or over express (I); (6) antagonists and agonists of NHP; (7) compounds that modulate the expression or activity NHP which can be used for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders, and cosmetic or nutriceutical applications; (8) identifying compounds that modulate, expression and/or activity of NHP; (9) degenerate nucleic acid variants of (I); (10) vectors that contain (I); (11) nucleotide sequences e.g. antisense and ribozyme molecules, that inhibit expression of (I); and (12) proteins that are functionally equivalent to NHPs.

BIOTECHNOLOGY - Preferred Protein: The NHPs are novel proteins expressed in human cell lines and human brain, pituitary, hypothalamus, adipose, cerebellum, adrenal gland, fetal lung and embryo cells.

ACTIVITY - Cytostatic.

MECHANISM OF ACTION - Gene therapy. No supporting data is given.

USE - NHP oligonucleotides are useful as hybridization probes for screening libraries and assessing gene expression patterns. NHP sequences are useful to identify mutations associated with a particular disease and also as a diagnostic or prognostic assay, and also in the molecular mutagenesis/evolution of proteins that are at least partially encoded by the NHP sequences. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NHP sequences are used in microarrays or other assay formats, to screen collections of genetic material from patients who have a particular medical condition. NHP nucleotide sequences are useful for drug screening effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body, and nucleotide constructs encoding NHP products are used to genetically engineer host cells to express NHP products in vivo. These genetically engineered cells function as bioreactors in the body delivering a continuous supply of a NHP, a NHP peptide, or a NHP fusion protein to the body. Nucleotide construct encoding NHP products are also useful in gene therapy for modulating NHP expression and to produce genetically engineered host cells to express NHP products in vivo. The encoded NHP polypeptides are useful for generating antibodies,

as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer.

EXAMPLE - None given. (40 pages)

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares substantial sequence homol. with animal kinases, especially NEK family kinases and calcium/calmodulin-dependent protein kinase. NEK family kinase homolog gene, which has been mapped on human chromosome 17, is **expressed** in, *inter alia*, human cell lines and pituitary, thymus, spleen, lymph node, bone marrow, trachea, kidney, prostate, testis, thyroid, adrenal gland, pancreas, salivary gland, stomach, small intestine, skeletal muscle, heart, uterus, placenta, adipose, skin, bladder, rectum, pericardium, ovary, fetal kidney, fetal lung, gallbladder, tongue, aorta, 6-, 9-, and 12-wk embryos, adenocarcinoma, osteosarcoma, and embryonic carcinoma cells. Calcium/calmodulin-dependent protein kinase homolog gene, which has been mapped on human chromosome 3, is predominantly **expressed** in fetal brain, brain, spinal cord, thymus, lymph node, trachea, lung, prostate, testis, thyroid, adrenal gland, stomach, small intestine, skeletal muscle, uterus, placenta, mammary gland, skin, bladder, pericardium, hypothalamus, fetal kidney, fetal lung, tongue, aorta, 6-, 9-,

and 12-wk embryos, and embryonic carcinoma cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares structural similarity with animal kinases, including cell division control protein kinases, serine/threonine protein kinases and membrane-associated guanylate kinases (MAGUKs). The NHPs are novel proteins that are expressed in, inter alia, human cell lines and human fetal and adult brain, pituitary, cerebellum, thymus, spleen, lymph node, bone marrow, trachea, fetal and adult liver, prostate, testis, thyroid, adrenal gland, pancreas, salivary gland, stomach, small intestine, colon, uterus, placenta, mammary gland, adipose, esophagus, bladder, cervix, rectum, pericardium, hypothalamus, ovary, fetal and adult kidney, and fetal lung cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares structural similarity with animal kinases, and particularly calcium/calmodulin-dependant protein kinases and serin/threonine protein kinases. The NHP is a novel protein that is **expressed** in, *inter alia*, human cell lines, **testis, pituitary, fetal brain, thymus, spleen, cerebellum, trachea, thyroid, adrenal gland, fetal kidney, colon, uterus, pancreas and lung cells.** In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares substantial sequence homol. with animal kinases, and more particular serine/threonine protein kinases. While NHP shares sequence homol. with other serine/threonine protein kinases, its primary sequence is unique. Its **expression** is detected in various human tissues including **brain, pituitary, spinal cord, spleen, trachea, kidney, prostate, testis, adrenal gland** cells, and gene trapped human cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.
